**Hops** 2026 – Now

Collaboration platform for teams and their AI agents

- Own features end to end, from research and design to implementation and deployment
- Work directly with customers and early adopters to test ideas and iterate toward product-market fit

**Zencoder** 2024 – 2026

AI workspace for coding and everyday work

- Designed interfaces and workflows for AI agents across the desktop app and IDE integrations
- Turned early product ideas into clear user experiences, from exploration to implementation
- Maintained and evolved the design system as the product expanded

**Appulate** 2020 – 2024

B2B platform for commercial insurance submissions

- Led the design team, hiring and mentoring designers and improving design processes
- Redesigned key B2B insurance workflows, from user research to detailed UI and prototypes
- Built and evolved the design system, driving adoption across product teams
- Introduced NPS tracking and helped improve the score by 20 points over two years

## Side Projects

**audiotour.io**

Audio guide app for exploring cities

- Co-founded and launched an audio guide app on iOS, Android and web, leading product strategy and design
- Conducted user interviews and ran acquisition experiments through paid ads and SEO, developing creatives and analyzing results

**Figma Tools**

- Designed, built and published Figma tools with over 100k downloads

## Skills

**UX/UI Design**

Solving customer problems while supporting business goals

**Design Engineering**

Taking features from problem discovery through design and code to production

**AI & Agents**

Building AI agents, reusable skills and workflows for design and development

**Product Discovery**

Conducting user interviews, running usability and A/B tests, and using key metrics to improve the product

**Design Leadership**

Hiring and mentoring designers, coordinating the team and improving design processes

**Design Systems**

Building and evolving tokens, component libraries and documentation across Figma and code
